

# IT OPERATIONS ANALYTICS BY DATAVARD

What is going on in your SAP® system?

## HIGHLIGHTS

Datavard's solution for IT Operations Analytics (ITOA) : real-time user behavior, data and system insights to action.

Get the immediate benefits of:

- Detailed insight into user behavior and application usage
- Better planning and disaster prevention through simulation, prediction and alerting
- Take actions based on deep-dive data + system insights
- Data management, system usage and performance trends visualizations
- Learn "Big Data" in a familiar environment

## SIMULATE DATA GROWTH AND USER BEHAVIOR

Your organization is growing and opening new locations, onboarding new people, or planning changes to the infrastructure? Use Datavard's solution for IT Operations Analytics (ITOA) to simulate all possible scenarios. See how changes, like more users for a critical application or data growth, impact on system's performance and make informed decisions for increasing speed and capacity.

## TURN INSIGHT TO ACTION: PREDICT TRENDS AND TAKE THE RIGHT DECISIONS

Accurate predictive analytics is key to successful business strategies and investments. Manage your IT like a business and make sure your decisions are based on a panoramic view of your data, the way users are using it, system capacity and further detailed insights.

## BE PROACTIVE: MANAGE THREATS BEFORE THEY ARE AN ISSUE

Get into the driver's seat and switch from disaster recovery to no more disaster! You have enough of data in your system to predict and avoid future downtimes: the key is continuous and comprehensive real-time system analysis, benchmarking and knowing, when to react. Define your most critical KPIs to alert before it is too late. Know, what is going on in your system, always, in real-time.

## DATAVARD'S SOLUTION FOR ITOA:

- Discover new ways of analyzing application usage + system performance
- Predict data and system growth
- Verify the impact on systems performance
- Understand and analyze user behavior
- Reveal trends and patterns in your system and data
- Take optimization actions directly from the analysis
- Pinpoint downtime root causes
- SDK for customization in addition to 300+ predefined KPIs for benchmarking and best practices alerting
- Intuitive and easy to use FIORI Frontend
- Developed on SAP® Cloud Platform
