

WE KNOW HOW TO SHRINK YOUR DATABASE BY 30%

GET YOUR SAP SYSTEMS READY FOR BIG DATA SCENARIOS

Each day your SAP landscape is facing more and more data, straining its capacity and performance. Manage it smartly and keep your system lean and clean – whether you are planning migrating to SAP HANA, or experiencing exponential data build-up slowing down your system, our comprehensive archiving and data cleansing solution will help you to optimize your SAP systems and save on operational costs.

OUTBOARD™ FOR ANALYTICS

INTELLIGENT ARCHIVING SOLUTION FOR YOUR SAP BW

If you are running a large SAP BW system, a rapidly growing BW system, or you are preparing for SAP HANA migration, make sure your SAP is well-optimized. Manage your data according to its value - save on ownership costs and speed up your performance. DataVard OutBoard for Analytics is the only archiving solution available that allows you to choose which database you would like to use. It keeps your system light, while the archived data remains easily available:

- No additional hardware or database needed
- NLS write enabled
- Fast mass archiving
- All data remains accessible
- Supports various databases

OUTBOARD™ FOR HOUSEKEEPING

DID YOU KNOW THAT UP TO 40% OF YOUR DATABASE IS CLUTTERED WITH TEMPORARY DATA?

Every SAP system transaction creates temporary and technical data, which adds no value, slows down your system's performance and increases operational costs. You need to perform regular housekeeping to keep your system in top shape by reducing its size. OutBoard for Housekeeping helps you keep your SAP systems lean and clean. It compresses temporary data and moves them to a recycle bin. From there, you can either retrieve it if necessary or mark the data for automatic deletion.

- Fast 100% ABAP implementation
- One central dashboard for monitoring your housekeeping activities
- Cross system housekeeping
- Automatically handles mass processing of data trash
- Shrinks your database and speeds up system performance

OUTBOARD™ FOR TRANSACTIONAL SYSTEMS

IS YOUR TRANSACTIONAL SYSTEM IS SLOWING DOWN OR GROWING TOO FAST?

Exponential volume growth often goes together with performance issues in ERP systems - discover your archiving potential to significantly reduce the size of your system and speed up its performance.

Datavard OutBoard for Transactional Systems is a SAP-certified, end-to-end archiving solution designed to manage transactional data, control the system size and cut SAP maintenance costs by automating the whole archiving process:

- Supports multiple storage solutions (traditional databases as well as Hadoop)
- Automates archiving process
- Analyses data distribution and checks for unresolved issues
- Meets legal requirements for retaining and storing data
- SAP-certified

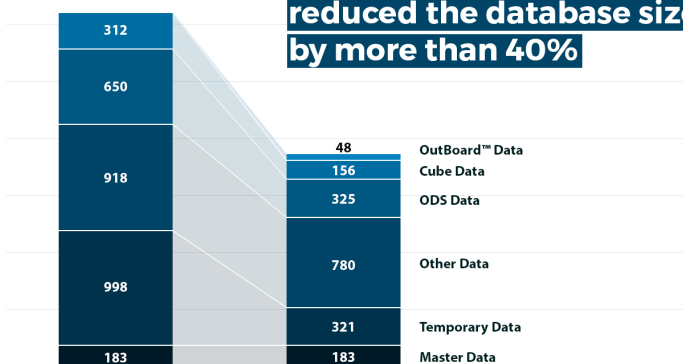

OUTBOARD™ FOR DOCUMENTS

Combine cutting-edge OutBoard data management with clever document handling. OutBoard for Documents captures incoming documents from various sources and sends them to the premise or cloud storage server. It is based on SAP document archiving and viewing standards and enables automation.

OUTBOARD™ FOR DECOMMISSIONING

With the move to S/4 HANA, many companies want to reshape processes, starting greenfield with a new system and the legacy SAP system has to retire. Just turning it off is not an option in most cases: due to business and legal restrictions those systems should be available also for several more years. OutBoard for Decommissioning offers a great solution for archiving complete systems based on the proven Datavard OutBoard technology.

OutBoard™ for Analytics reduced the database size by more than 40%
