

Datavard OutBoard Housekeeping

Taking out the trash data in SAP landscapes

Up to 40% of your database is filled up with no-value data.

Did you know that as much as 40% of SAP BW data is temporary and should be deleted? This is not only polluting SAP with no-value data but it also slows down the performance of the system.

HeidelbergCement, one of the world's largest building material suppliers, initially reduced the size of their SAP landscape consisting of seven BW systems by 15 TB. And by using automatic ongoing housekeeping, their SAP BW team saves six hours of effort every week.

What is OutBoard HouseKeeping?

Every SAP system generates data that loses value quickly after its creation. All kind of logs, documents and staging data are created and should be deleted on a regular basis. Often, we see SAP systems polluted with no-value data due to a lack of resources to perform regular deletion of aged temporary data. The benefits of automated housekeeping in a complex SAP landscape consisting of ERP, BW, CRM, SRM, HANA and other landscapes include reduced TCO for storage and ongoing maintenance along with improved system performance across the board.

OutBoard HouseKeeping is an ABAP based solution that deletes SAP temporary data safely leveraging a RecycleBin feature, pre-delivered housekeeping objects and provides a framework for automated housekeeping of complex landscapes from one central system.

Highlights

- Automatic deletion of aged, no-value or trash SAP data
- Set up once and schedule everywhere across the SAP landscape
- Delete data safely with RecycleBin
- Includes 60+ housekeeping objects
- Future-ready with HANA specific housekeeping
- Adjustable for custom tables and scheduling of custom reports

Key Benefits

- **Saves time and effort**
Quick set up, easy maintenance and ongoing housekeeping across the SAP landscape
- **Improves performance**
Speeds up SAP system navigation, reporting and loading - no trash data to slow things down
- **Lowers TCO**
Shrinks the footprint of your entire SAP landscape to lower costs
- **Always updated**
Updates more than 60 housekeeping activities based on the latest SAP notes every three months

About Datavard

A leader in SAP data transformation and data management solutions with unparalleled SAP programming expertise for SAP S/4HANA and BW/4HANA migration, Big Data landscape design, cloud migration or system harmonization. Datavard is a privately held company headquartered in Heidelberg, Germany, with more than 200 data-driven employees around the world.
