

OutBoard ERP Archiving and Document Processing

Make your data work for you! Innovate and stay compliant without breaking the budget

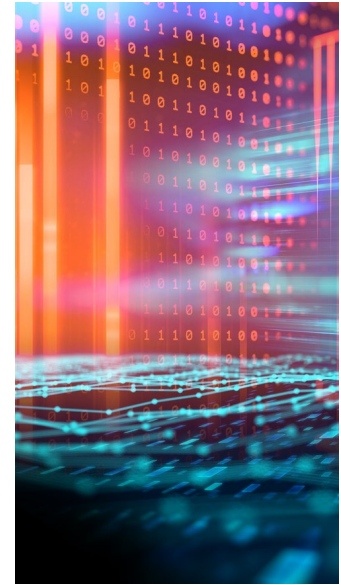

Data has become a key strategic resource for companies today. High quality data assures that processes run smoother and operations more efficiently, but even more importantly - it helps us to better understand our customers in order to build better relationships and it can even offer opportunities for innovation and disruption. The key is to not only collect various types of data, but also to accurately analyze and transform it into real value. However, the sheer volume of data that companies need to handle creates ever increasing storage requirements and overall total cost of ownership, especially when running on state-of-the-art technologies such as SAP HANA. These guarantee top speed and performance, but the more data there is, the more problems it creates and the higher the costs.

Don't just archive, analyze and automate

Find the sweet spot by identifying data you really need. SAP systems are easily cluttered with temporary data, low value data or infrequently needed data or data which only needs to be stored for legal purposes. The first step is to identify data and based on this, then archive or delete it.

Accurate data management lowers costs, improves data quality, ensures compliance and slows down data growth. When done right, data management creates many long-term benefits for a company.

OutBoard ERP Archiving and Document Processing can help you identify the archiving potential of your system, understand the space you can save and use this information to set up archiving automatically, taking not only the guesswork out of archiving, but also eliminating tedious, manual work.

Mitigate risk and ensure compliance while supporting both your Cloud and S/4HANA strategy

OutBoard ERP Archiving and Document Processing can not only cut your SAP database size up to 50% in advance of a move to S/4 but with our flexible storage management, you can store the archived data compliantly in the most cost-effective storage for you. This can be a storage you already have, or any of the 30+ databases and technologies supported - including all major Cloud providers (Microsoft, Google, AWS). This modular approach to storage management means, even if your Cloud strategy changes, or expands to go multi-cloud, you can easily switch or add storages and no matter how long you need to keep your data - you can always add or migrate to the latest and greatest technology to ensure seamless, future-proof access to your historical data.

However, data shouldn't be kept forever and whenever it's not needed, or more importantly, when it is legally required to destroy the data, with OutBoard's straightforward capabilities for Retention Management and Legal Hold you can rest assured you are covered for audits, GDPR, HIPAA, GBLA etc.

Access and leverage 100% of your SAP data for intelligent insights

Aside from accelerating the archiving process and supporting both your S/4HANA and Cloud strategy, OutBoard ERP Archiving and Document Processing ensures you can still capitalize on the value of historical data by making it transparent and available for essential analytics and intelligent insights that can not only foster innovation but even disruption!

And even though your data may be archived to the cloud – you can still easily access it via your standard SAP transactions so there is no disruption to any business need to access the data and you not only save space, but this can lead to increased performance and overall better business continuity

With OutBoard ERP Archiving and Document Processing you can be sure you have the best solution for you in terms of costs, functionality, future architecture and a foundation to serve your intelligent enterprise.

In practice, OutBoard ERP Archiving and Document Processing can cut your sap database in half, slow down future data growth, improve system performance and enable intelligent insights with historical data which all contribute to lower overall SAP TCO and increased innovation and business continuity.

OutBoard ERP Archiving and Document Processing: Quick Facts

- Saves storage: Up to 50%
- Slows down data growth
- Brings return on investment in 6-18 months
- Improves system performance
- In line with the current and future architecture
- Stores and destroys data and documents compliantly
- Makes archived data transparent and available for analytics
- Double future safe - ready for S/4HANA & Cloud
